

## A Real-Time Location System That Helps Keep Personnel Safer

Revolutionary technologies to identify, locate, and track people anywhere on the globe, both indoor or outdoor and stationary or on the move, can bring unprecedented benefits to organizations and citizens alike. They allow for enhanced safety giving *security* new meaning and opening the doors to endless possibilities for information systems to communicate with one another.

AiRISTA Flow solutions include wearable RFID and BLE tags that communicate over Wi-Fi, and intelligent software that can be customized to fit the specific needs of your organization. AiRISTA Flow customers can apply business rules to the software that allow the grouping of individuals in ways that facilitate response protocols and communication dissemination. Some of the most common events tracked using the AiRISTA Flow Personnel Safety Solution include:

- Staff accidents or injuries
- Personal attacks
- Biohazard clean-ups
- Calls for emergency help
- Code alarms

Keep administration or rescue personnel informed in real-time of the location and conditions of workers in case of an evacuation. Detect, report, monitor and notify the presence or departure of personnel within and from predefined areas as small as a few square feet or as large as many square miles. Trace workers based on historical data collected on the location of individuals determined to be infected with contagious illnesses within a building, factory or an oil rig. With third party integrations, this solution can work to allow locking mechanisms to engage, activate on-premise alarms, reposition security cameras, or even notify local police.

AiRISTA Flow's solutions for personnel tracking are built upon years of research and development to be a cut above the rest.
