

Top 25 Tracked Assets

AiRISTA Flow uses Wi-Fi based asset tags and intelligent visibility software to help automate inventory management and par level monitoring. The AiRISTA Flow solution provides mapped, real-time visibility into the location of individual assets and groups of assets to go beyond basic asset tracking. AiRISTA Flow visibility platforms show the condition and status of assets (i.e. clean/dirty, in-use/available) and can alert staff based on asset events depending on the business rules that are set in the system so that customers can improve patient throughput and automate maintenance work-flows. Just some of the hospital assets tracked and managed using AiRISTA Flow include:

1. Balloon Pumps
2. Beds - specialty/all types
3. Breast Pumps
4. Cameras
5. Carts - crash, vitals
6. Workstations On Wheels (WOWs)
7. Dinamaps
8. Dopplers
9. Enteral Feeding Pump
10. Gurneys
11. Infusion Pumps (singles, doubles, triples, intelligent)
