

AiRISTA FLOW

Top 25 Assets Tracked and Managed

AiRISTA Flow Unified Vision Platform for Healthcare

The AiRISTA Flow Real-Time Location System uses Wi-Fi & BLE asset tags and the AiRISTA Flow Unified Vision™ software platform to automate inventory management and par level monitoring.

Asset Tracking

The AiRISTA Flow solution provides mapped, real-time visibility into the location of individual assets and groups of assets. AiRISTA Flow RTLS also goes beyond basic asset tracking and shows the condition and status of assets (i.e. clean/ dirty, in-use/available) and alerts staff based on asset events so that customers can improve patient throughput and automate maintenance work-flows. Just some of the hospital assets tracked and managed using AiRISTA Flow RTLS, include:

- | | |
|---|--|
| 1. Balloon Pumps | 15. Pacemakers - external |
| 2. Beds - specialty/all types | 16. PCA Pumps |
