5 CHARACTERISTICS OF AN EFFECTIVE STAFF SAFETY SOLUTION

Staff safety solutions have come a long way. Whether you are an emergency department nurse, a hotel guest room attendant, or a classroom teacher, the need for a an SOS style panic device is increasing. But with so many types of companies and technologies hustling to address the market, its hard to know [where to start](#).

1. Ease of Deployment

Unlike solutions that require new wires to be run through the building, existing access points can “listen” for safety events from tags worn by staff and the public. When an emergency is triggered form the tag’s button or switch, the location is calculated based on the surrounding access points and relayed to the vendor’s software platform which acts based on response rules.

2. Location Accuracy & Precision

Legacy access points positioned along a hallway might result in only 8-10 meters of accuracy. This could deliver location results representing as many as 4 rooms! Several techniques can improve accuracy including a site survey resulting in RF fingerprinting for each room.

3. Tag Features

The simplest tags offer a single button to signal an emergency (e.g. AiRISTA’s [A1 tag](#)). More functionality allows a tag greater functionality (e.g. AiRISTA’s [B4n tag](#)).

- Programmable buttons for things like escalation request
- Message interface to help coordinate
- LEDs and audible alerts to confirm alert detection
- Man-down detection for an unresponsive victim

4. Response Rules

Just as important as generating an SOS alert is coordinating the response. Options for notifying responders include text messages, console alerts and even email (which might not get the immediate attention of a text message). If responders also wear tags with alerting and messaging capability, the tag can act as a responding device.

5. Event Replay & Complementary Features

The ability to record the “bread crumb” trail and timestamps of team members provides compelling documentation. [Platforms like AiRISTA's](#) provide a training mode where emergency drills can be recorded and replayed to help drive process improvement. And the workflow created by the customer to coordinate the response can be validated by the system for errors.

End of Year Promotion !

Current AiRISTA customers can see how asset tracking can improve operations.

Receive 25 FREE [A4n tags](#) when you purchase the corresponding 25 software licenses (3 year subscription or perpetual license). This is an opportunity for existing customers that do not currently use asset tracking to add asset tracking to their RTLS deployment. The offer applies to Vision & UVS customer and expires December 31, 2022. Contact your sales rep at salesinfo@airista.com, or your AiRISTA reseller partner for details.
