

A Coordinated Response to Staff Safety Events

SPECTRALINK & AiRISTA

Alert assurance and a speedy response

In the fast-paced and ever-evolving hospital workplace, the safety of employees stands paramount. Recognizing this critical need, staff duress systems have emerged as essential tools to ensure the well-being and quick response in emergencies. Spectralink's enterprise mobility solutions seamlessly integrate with AiRISTA's innovative duress systems, providing healthcare workers with immediate emergency help. AiRISTA's cutting-edge solutions leverage wireless technology to offer reliable and precise real-time assistance, combining the best of traditional and modern systems. Their portable devices provide an enhanced layer of security for healthcare professionals..

- **Two-way messaging delivers the alert and its location to the responders' devices. For assurance, confirmation is sent to the originating tag.**
- **Critical environments like mental health facilities and prisons require responders to be notified in less than 10 seconds, often less than 5 seconds. AiRISTA has optimized its solution for a speedy response.**
- **Custom response rules are simple to set up and alert security and staff in the area, on the floor, or across the building. Escalation is as simple as pushing a button on the device.**

**NURSES ARE
5x
MORE LIKELY TO
EXPERIENCE WORKPLACE
VIOLENCE**

AiRISTA's RTLS Mobile App is Available for Spectralink Devices

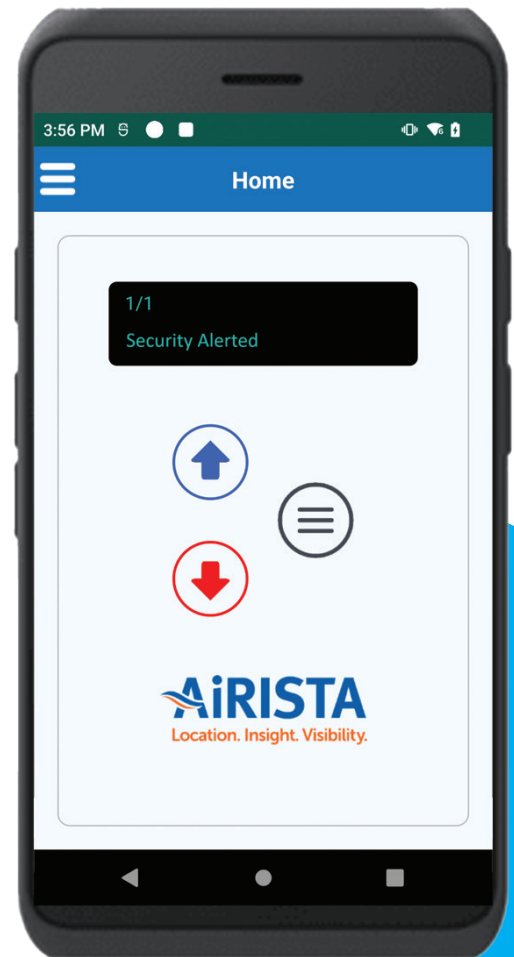

As incidents of violence increase in the workplace, employers have a responsibility to keep staff safe. Spectralink's industry-leading Versity smartphones and AiRISTA's cutting-edge RTLS technology come together to create a layer of protection and peace of mind. Integrating AiRISTA's unique, 2-way communicating staff safety solution as an application on Spectralink's Versity 95/96 and 97 mobile devices not only provides a safety solution but reduces the number of unique devices carried by staff.

With a push of a button on the Versity, AiRISTA's sofia RTLS software platform executes a series of user-defined rules sending messages to the displays of responders' devices. The duress alarm is also triggered by Versity's SAFE 'man down' feature, which includes motion sensors, reassuring workers of safety at all times on the job.

Spectralink's Versity 95/96 and 97 devices support AiRISTA's mobile app to provide staff safety and alerting in duress situations.

The Versity 95/96 and 97 provides unparalleled voice and data converged in one lightweight, easy-to-use, award-winning, and purpose-built-for-enterprise smartphone. Designed specifically for deskless workers in voice-critical, zero downtime, rugged 24x7 environments, the Versity 95/96 and 97 deliver superior power and application functionality for communication, notification, documentation, information, and duress notification with customizable response rules.

- **Real-time notifications:**
Location tracking and communication leverage existing Wi-Fi infrastructure to reduce costs and leverage your existing IT investments. Advanced roaming technology ensures unparalleled connectivity.
- **Integrations provide a holistic response:**
AiRISTA's platform integrates with building systems and third-party applications to control devices like door locks, cameras, and sirens and provide escalation via e911 services.
- **Extend value to other use cases:**
Location tracking can automate workflows and records associated with security rounds or nurse rounding (including dwell times). For employee privacy, location tracking can be enabled only during emergencies, and the system can anonymize identities.
